Extra Credit Submission for IPIMS
Group 6

Our group has proposed our extra credit feature to allow for a responsive layout design. Not only will we prepare a fully-functional web based application that is nicely viewable on a computer, but we will develop the application to automatically resize for any device that accesses the IPIMS on mobile platforms. The display will replicate to that of an iPhone app or other mobile-based application.

This includes, but is not limited to:

- iPhone
- Computer (Firefox, Chrome, Opera, Internet Explorer, etc)
- iPad
- Android-based cell-phones
- Tablets
- Wireless devices with internet access
- and More!
